

Designed by Fawzi Emad on 4/18/2000.

Rev. 7/1/2000

Advantages of this nestbox:

- * Never leaked in the heaviest rains due to low inclination of roof (5 deg) and grooves on the underside of roof
- * Height of hole to floor is easily modified: just add amount wanted to the length of the 2 sides, back and front
- * Can be made from one piece of wood, 1 x 12 three foot long
- * Easy to mount traps on the front (like the Huber type of trap)
- * Adequate ventilation
- * Convenient top and/or front opening
- * Should it ever leak, the floor has compound cut corners which do not clog up
- * Large roof provides adequate shade in hot weather
- * Roof can be glued/screwed on leaving a front opening box
